DETAILED ACTION

RESTRICTION

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1-12, drawn to a system for a method for acquiring 3D color information of object comprises light source to acquire texture image and colors; analyze color composition of an object; calculate corresponding locations of color strips of the pattern light source in the pattern image; determine colors of the pattern image; correcting colors of the pattern image; and calculate 3D model of the object and obtaining the 3D model of the object from the color composition, classified in class 382, subclass 154.
 - II. Claims 13-16, drawn to a method acquire 3D color information and generate the pattern comprising: provide a primary encoding unit; add one of the basic colors behind the primary encoding unit to form a new encoding unit; confirming whether the new encoding unit follows a predetermined color sequence; putting the new encoding unit in a corresponding cluster; and repeat the above steps to correctly locate all the encoding units, classified in class 382, subclass 232.

2. Inventions I, and II are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct from each other if they are shown to be separately usable. In the instant case, invention I has separate utility such as analyze color composition of an object; calculate corresponding locations of color strips of the pattern light source in the pattern image; determine colors of the pattern image; correcting colors of the pattern image; and calculate 3D model of the object and obtaining the 3D model of the object from the color composition. Invention II has separate utility such as provide a primary encoding unit; add one of the basic colors behind the primary encoding unit to form a new encoding unit; confirming whether the new encoding unit follows a predetermined color sequence; putting the new encoding unit in a corresponding cluster; and repeat the above steps to correctly locate all the encoding units. See MPEP § 806.05(d).

3. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art because of their recognized divergent subject matter, restriction for examination purposes as indicated is proper.

4. Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

5. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Brian Q. Le whose telephone number is 571-272-7424. The examiner can normally be reached on 8:30 A.M - 5:30 P.M.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Matthew Bella can be reached on 571-272-7778. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
